Safe-Hub

An integrative platform facilitating access to currently fragmented knowledge on pollinators at national & European levels

Safe-Hub is the single nexus point for data, information and toolkits on pollinator conservation from the Horizon 2020 project, Safeguard, and other relevant pollinator projects, networks and initiatives.

- facilitates access to currently fragmented knowledge on pollinators at national and European levels

- provides a high-quality, user-driven interactive experience to facilitate pollinator data and knowledge sharing, support recommendations, and co-design solutions to wild pollinator decline

- acts as a core nexus for a wide range of stakeholders, such as citizens, scientists, farmers, protected area managers, beekeepers, businesses, or representatives of public authorities

- provides useful information on pollinator health, monitoring, distribution, and conservation, along with newly developed and existing data and tools

Safeguard is an EU-funded Horizon 2020 project that aims to substantially contribute to reversing the loss of wild pollinators across Europe by increasing our understanding of the direct and indirect drivers of pollinator declines and their environmental, economic, and societal impacts and delivering an integrated assessment framework as a basis for a portfolio of effective policy and practice solutions.
